

C. Payroll & Benefits Administration Process Vision

Process Scope and Characteristics

At a high level the payroll process within the State is made up of 5 distinct sub-processes:

The payroll process within the State includes all of the payroll activities beginning with supervisors collecting completed timesheets to distributing payments to employees. This process also includes benefits administration.

Customers and Requirements

The current payroll process focuses mainly on meeting legislative requirements. The new process will focus more on what customers value while ensuring legislative requirements are met.

CUSTOMERS	WHAT THEY VALUE
The Public	<ul style="list-style-type: none">• Easy access to government salary information
Employees	<ul style="list-style-type: none">• Exception based time entry• Accurate, timely receipt of pay• One stop shopping for benefits and payroll information• Speedy and expert advice on a variety of benefits and payroll information
Managers	<ul style="list-style-type: none">• Simplified review and approval of time and the ability to track labor distribution• Reporting capability that is specific to their needs• Focus on higher value added activities which better serve the agency's mission
Governor and Legislature	<ul style="list-style-type: none">• Efficient government• 'Openness in Government'
Suppliers (service providers, banks)	<ul style="list-style-type: none">• Timely, accurate payments and information• Single point of contact for information• Systems that are easy to link to and/or integrate with

Vision Statement

“The payroll and benefit administration process will produce timely and accurate information and payments. It will feature an integrated, paperless, and user friendly system that is accessible yet secure and can respond to unique agency needs. A shared services center will be created to standardize transaction processing and consolidate effort to lower cost. The State will also operate as a single employer and will harmonize policies and procedures to serve its customers more effectively.”

Old Way Themes Vs. New Way Themes

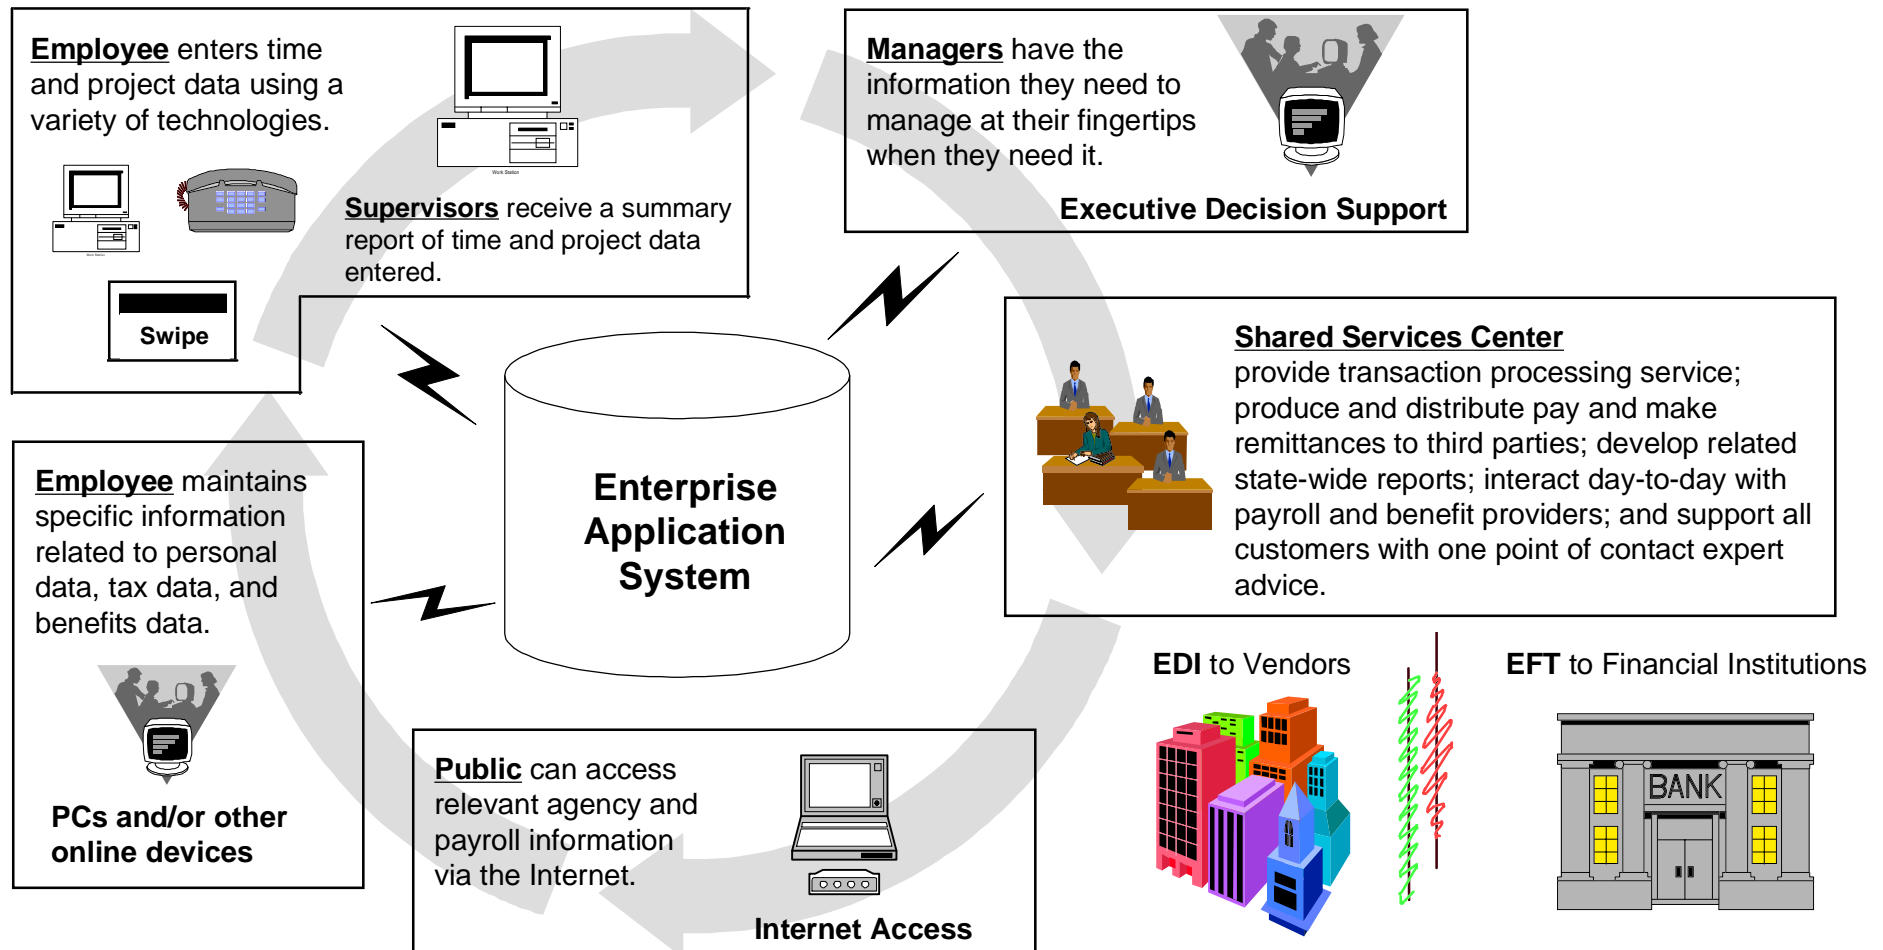

The State will experience a significant shift in thinking about the way payroll processing is undertaken.

OLD WAY		NEW WAY
<ul style="list-style-type: none">• Inflexible, fragmented and labor intensive processes are time consuming and cumbersome.	→	<ul style="list-style-type: none">• Flexible, simplified, highly automated and paperless processes that are adaptable to meet changing needs.
<ul style="list-style-type: none">• Systems are not integrated, are not accessible to many stakeholders and lack effective reporting capability and do not have effective built-in edits.	→	<ul style="list-style-type: none">• An enterprise-wide, user friendly and secure system that features custom/ad hoc reporting capability on accurate and timely data and built-in system edits.
<ul style="list-style-type: none">• Redundancy and conflicting policies/procedures among the agencies. Agencies are treated as separate employers and no leveraging of information and skills among the agencies.	→	<ul style="list-style-type: none">• Promotion of State of Montana as a single employer with consistent policies and shared resources.

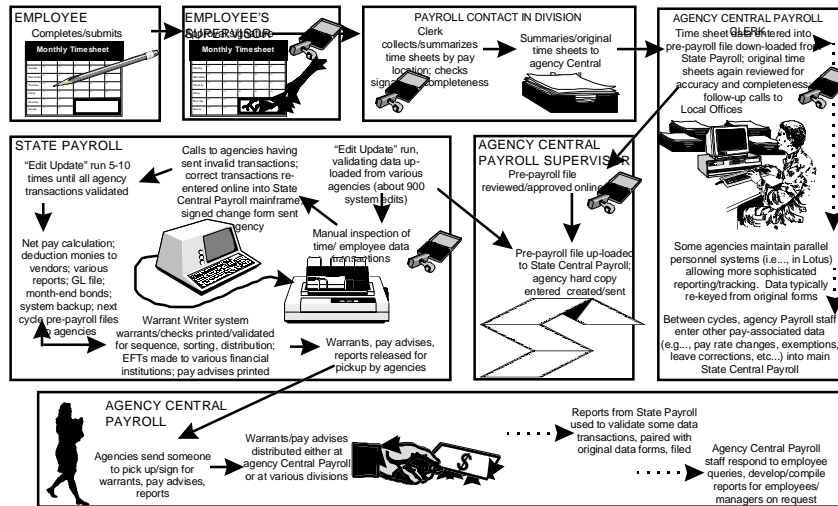

Conceptual Design

The new design will feature data entry at source without formal approvals, minimal manual effort, self-service reporting, public access, and a shared service processing center with direct links with external service providers.

Performance Comparison

Implementing a new model will reduce effort, cost and cycle time by at least 50%.

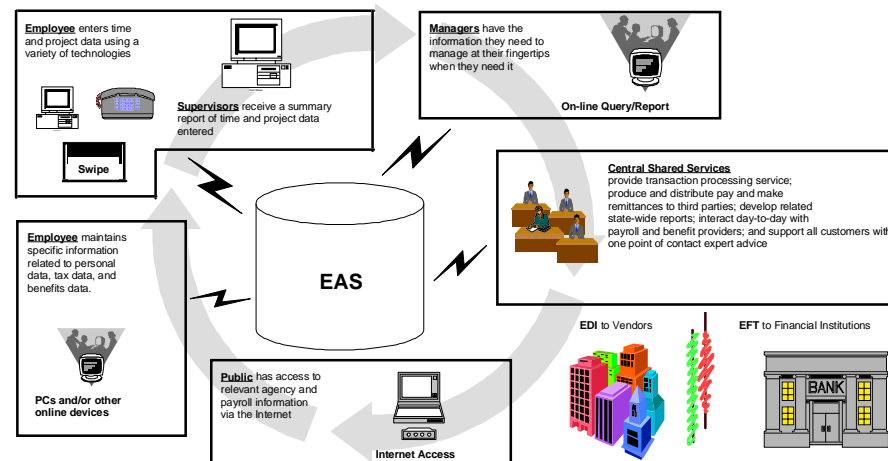

'As-is'

- 900 people directly involved
- 40 FTEs
- 5 approvals of time
- 20 steps
- 10 day cycle time
- \$7.25 processing cost per payment

'To-be'

- 10-15 people directly involved
- 10-15 FTEs
- No formal approval of time
- 5-6 steps
- 5 day cycle time
- \$3.00 (or better) processing cost per payment

Operating within the Vision

The vision of the new payroll PROCESS leads to much simpler, faster, more efficient, and less costly operations.

CHARACTERISTICS	BEFORE	AFTER	BENEFITS
Number of Steps	About 20 steps	About 5-6 steps	<ul style="list-style-type: none"> • Simpler • More efficient • Faster • Lower Cost
Number of People Involved	About 900 people representing 40 FTE	About 10-15 people and 10-15 FTE	<ul style="list-style-type: none"> • Less fragmentation • Lower cost • More efficient • Freed up resources
Number of Approvals	About 5 manual approvals	Zero formal approvals	<ul style="list-style-type: none"> • Simple • More efficient • Faster • Lower Cost
Accountability for Accuracy of Time and Benefit related data	Fragmented responsibility throughout the process	Accountability at source, e.g. the employee	<ul style="list-style-type: none"> • Less effort to correct errors • Faster • Lower cost • More efficient
Flexibility	Defined work steps within rigid time frames	Agency specific processes designed to meet unique needs	<ul style="list-style-type: none"> • Meets agency needs • Eliminates spikes in work load at central processing

Operating within the Vision

The vision of the new payroll SYSTEM incorporates integrated, timely, accurate, and accessible information.

CHARACTERISTICS	BEFORE	AFTER	BENEFITS
Integration	Disparate stand alone systems linked through a variety of interfaces	An integrated enterprise-wide database	<ul style="list-style-type: none">• Shared systems, common across Government• Effort is focused on planning and delivering programs rather than maintaining systems
Flexibility	Inadequate and out dated functionality	Software that meets business requirements and is easily configured to meet changing needs over time	<ul style="list-style-type: none">• Modular characteristic of EAS packages allows flexibility in design, implementation and use• Technology is scalable to allow for increased transaction volumes over time
User friendliness	Hard to learn and use	Intuitive and easy	<ul style="list-style-type: none">• Windows-based user interface with a common look and feel across all modules• Point and click functionality• Extensive online help• On-line warnings and edits

Operating within the Vision

SYSTEM cont'd.

CHARACTERISTICS	BEFORE	AFTER	BENEFITS
Accessibility/Security	Limited access	Broad sharing of information	<ul style="list-style-type: none">• Broad accessibility and sharing of information among stakeholders• Security based on user defined requirements• Security at the 'screen' level

Operating within the Vision

The vision for the new payroll ORGANIZATION DESIGN and POLICY STRUCTURE results in the State as one employer leveraging shared resources, technologies, and information.

CHARACTERISTICS	BEFORE	AFTER	BENEFITS
The Extent of Centralization	<p>Redundant processing</p> <p>Varied policy and practice among the agencies</p>	<p>Shared services processing at the State level</p> <p>Consistent policy at the State level</p>	<ul style="list-style-type: none"> • Reduced duplication of effort • Improved economies of scale • Shared information across agencies, managers, employees and stakeholders • Better skill specialization • Better leveraged technology investments through standardization • Consolidated reengineering efforts leading to ongoing improvement • Improved transaction processing standards • Allow agencies to concentrate on core competencies and focus on value-added activities

Operating within the Vision

Employees will experience changes in the way they track and report time and the way they manage their own benefits and personal data.

Time Entry

The table to the right represents the combinations of employee types and time entry methods:

- Standard hours and funding sources refers to employees who have little variation in data entry from pay period to pay period
- Exception entry includes entry for things such as sick and annual leave, compensatory time, etc.

Type of Employee / Method of Entry	Default Time Entry	On-line within EAS	Peripheral Technologies (such as IVR)
Standard hours and funding sources with access to PC	•	• (for exception entry)	
Standard hours and funding sources without access to PC	•		• (for exception entry)
Non-standard hours and funding sources with access to PC		•	
Non-standard hours and funding sources without access to PC			•

Benefits and Personal Data

Maintenance

Employees will be able to retrieve and maintain their own data electronically:

- benefit open enrollment
- new hire information processing
- benefit and claim status
- personal data changes and inquiries

Today

- Employees are bounced back and forth between their manager and HR when they ask simple questions like, "How much sick leave can I use for maternity leave?"

Impact

- The employee spends up to 2 hours of work time obtaining an answer to his/her question and becomes very frustrated in the process, resulting in lower productivity and morale. An accessible system coupled with a service center could answer the question in 5-10 minutes.

Operating within the Vision

Supervisors and Managers will spend far less time collecting and tracking data and much more time managing resources with enhanced tools.

Supervisors will no longer be required to collect, review, and then sign-off their employees timesheets.

- Employees track and report own time and project costing data;
- Supervisors receive summary time reports each pay period; and,
- Supervisors receive online notification of events requiring their attention such as time entry which falls outside of logical edits.

Supervisors and Managers will have the ability to directly access the employee database.

- Supervisors produce ad hoc queries and reports to budget, forecast and manage employees, etc.; and,
- Supervisors can navigate the system online to find the information they need when they need it.

Operating within the Vision

Other stakeholders will be able to access timely, relevant, and accurate data as they need it.

The Public will have access to information.

- Through the Internet they can gain access to the information they now have to contact a State resource to obtain.

Legislators will have access to accurate data in real time.

- They will be able to produce their reports and budgets using data that is clearly defined (e.g. base positions vs. modified positions).

Third parties such as banks and benefit providers will be electronically linked to the database.

- Information feeds such as EFT and EDI using the Internet as a communication tool will be established to provide efficient and cost effective transaction processing data, such as employment verification, to share in real time, avoiding delays and adjustments in future periods.

Impacts and Implications

The new vision revolutionizes the processes, centralizes the effort, and reduces costs dramatically.

- Agencies will no longer have a dedicated central payroll function but will be supported by a shared service center.
- Payroll FTEs will be reduced by 75%.
- Only employees with non-standard hours or those employees who need to make exception entries will be required to enter a timesheet.
- Time entry approval will apply on an exception basis only - the system will police data entry by establishing appropriate logical edits.
- Employee are responsible for and are accountable for the accuracy of time and project costing data entry.
- Forms, timesheets, reports, etc., are all online.
- Direct deposit is standard; otherwise EFT to a bank where people will need to go to pick up their check/pay.
- Potential legislative and labor agreement changes to address timesheet and related issues.

Business Case - Quantifiable Benefits

The State can take advantage of significant savings by embracing the vision of a shared service center utilizing state of the market technologies and tools.

SAVINGS	AMOUNT	COMMENTS
Labor Cost Savings	\$800,000 to \$960,000	25 to 30 FTEs eliminated at an average of \$32,000 per FTE per year.
Overhead Savings	\$200,000 to \$240,000	25% of Labor Cost Savings
Operating Savings	\$500,000 to \$600,000	Cost to operate Payroll portion of PPP plus agencies internally developed sub-systems (assuming payroll comprises 74% of total PPP operating costs)
Total Annual Savings	\$1,500,000 to \$1,800,000	

Business Case - Quantifiable Investments

To take advantage of significant savings the State will need to make some additional one-time investments.

SAVINGS	AMOUNT	COMMENTS
Shared Services Center	\$350,000 to \$500,000	Cost to renovate a new facility, technology costs including set up on LAN, PCs, telephone and headsets, implementation expenses, training, recruitment/hiring, transition costs, redeployment/restructuring, general project administration, expenses, and other items
Peripheral Technologies	\$500,000 to \$750,000	EDI, EFT, IVR (includes hardware, software, and implementation)
Total One-Time Investment	\$850,000 to \$1,250,000	

Business Case - Net Benefit

The State stands to benefit even during the year it makes the investment in the shared services center and the additional technologies.
